A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 17, 2004 has been entered.

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) a patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-10 are rejected under 35 U.S.C. § 103 (a) as being unpatentable over Kreckel et al. (US 6,588,337).

With respect to claim 6, MacPhee et al. teaches a method for cleaning a soiled surface of a cylinder in a printing press having the steps of providing a supply roll 126 with a cleaning cloth 124 pre-treated with a solvent (Kreckel et al., col.3 lines 60-63), placing the pre-treated cleaning cloth via a pressing means 38 against the soiled surface of a blanket cylinder 114 and rolling up the soiled cleaning cloth by a take-up roll 128. Kreckel et al. does not teach clearly the cleaning cloth with a solvent of high viscosity. However, the use of a cleaning cloth with a solvent of high viscosity for cleaning a printing cylinder is conventional. Therefore, it would have been obvious to

one of ordinary skill in the art to modify the cleaning method of Kreckel et al. by providing a conventional cleaning cloth with a conventional use of a solvent of high viscosity for cleaning a soiled surface of the printing cylinder for optimum cleaning effects. Also, note that the selection of a desired solvent of high viscosity for a cleaning cloth would be obvious through routine experimentation in order to get best possible cleaning the surface of a printing cylinder. With respect to claim 7, Kreckel et al. teaches that a cleaning medium can be applied to a soiled surface of a cylinder for cleaning (Kreckel et al., col.7, the second paragraph). With respect to claims 8-10, the use of a dampening solution as a cleaning medium for cleaning a printing cylinder is well known in the art.

Response to Arguments

Applicant's arguments with respect to claims 6-10 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The patents to Lippold et al., lijima, Ebina et al., and Sondergeld et al. are cited to show other methods having obvious similarities to the claimed method.
